

Belcom247 expands Internap's data centre presence globally without compromising on reliability.

Belcom247 case study

Internap

08.2010

“Belcom247 has been completely professional throughout the project. They listened, confirmed, understood and followed through on everything we discussed. They were very flexible and easy to work with even with a complicated installation. In several instances the belcom247 team went way beyond my expectations.”

Bart Surratt,
Director, Internap
Network Services.

Internap is a leading internet solutions company that manages, delivers and distributes applications and content with 100% uptime performance and reliability. Internap operates across a global platform of data centres, managed internet services and a Content Delivery Network (CDN).

The Challenge

In order to meet growing global demand for its *The Ultimate Online Experience* product suite, a rapid expansion of Internap's data centre footprint in Europe was required so it could deliver optimum connectivity across Europe.

The key challenges belcom247 faced with this installation included making sure that the cabling and IT equipment used was compatible with the differing specifications for each European country. Also, the work had to be carried out in a way so as not to compromise on Internap's promise of providing 100% network availability to its customers.

What We Did

We deployed several teams of our highly skilled engineers at short notice to carry out suite build out and cable installation work at Internap's data centre facilities.

Throughout each stage of the project, we listened and confirmed our understanding of Internap's needs. We sourced only materials that met with Internap's stringent specifications and then delivered them to site personally.

In spite of the many hurdles that we had to overcome in meeting the differing local requirements which involved some challenging installation work, the project was finished on time and to budget. In fact, our teams were highly praised by Internap for their flexible approach, depth of knowledge, professionalism and 'can do' attitude seen throughout the project.

The Business Result

Internap successfully expanded its data centre footprint across Europe without compromising on its 100% uptime performance and reliability commitment to its customers.

Internap's *The Ultimate Online Experience* product is now available to more organisations across the globe.
