

# Our Design and Build team specialise in cabling installation and data centre suite fit-outs.

**The quality of the cabling design and installation plays a major role in the performance of your network infrastructure and that is why this should always be carried out by a reliable, highly experienced company like belcom247. In fact, we give much more, compared to our competitors, to get a good job done.**

Whether it's a single site installation or one that involves hundreds of points across the globe, belcom247 has the capabilities and the manpower to do an excellent job within the timeframe you require.

## **Structured Cabling**

A structured cabling system provides the critical foundation for your business operations and by employing belcom247 to design and install a standards-based system, you can reduce maintenance time, minimise downtime and save your company money. We are experienced and trained in a wide variety of fibre and copper cabling and we are certified installers for the most popular systems including TYCO Electronics, Molex, Excel, Brand-Rex and ADCKrone. Our other structured cabling related services include CAD design, MSVisio equipment rack elevations, infrastructure audits, project management, testing and certification and system commissioning.

What's more, all our installations are tested with the latest state-of-the-art Fluke Testing equipment, leaving you confident that your system has been installed to the highest of industry standards.

Feel free to put us to the test.

## **Data Centre Suite Fit-outs**

Belcom247 has designed and built new computer rooms and data centre suites, fitted out existing 'shell & core' facilities and expanded or refurbished live facilities.

Our clients value the fact that we are an independent vendor capable of supplying each required element of the build if needed, and that we are also content to work with our clients' preferred suppliers.

## **Next Step**
