

We can take care of your collocated IT and communications infrastructure.

Colocation is when a data centre operator or tenant rents space within its data centre to its customers for the housing of their server, network and storage systems. From this collocated space, the customer interconnects with other network service providers to run its IT and telecommunications infrastructure.

Organisations increasingly recognise the benefits of colocating mission-critical equipment off-site. They see significant resource and cost savings such as cooling, physical security and insurance when sharing a site rather than building and maintaining their own data centres. Availability of sufficient power to support is also driving customers to colocate.

Belcom247's Managed Colocation Service

Belcom247's Managed Colocation service complements and adds value to a data centre's basic colocation package by providing on-site technical support, ensuring that your collocated IT and telecommunications infrastructure runs smoothly.

Our Managed Colocation service offers the benefits of a traditional outsourced model including cost savings, security and availability, whilst allowing you to retain ownership and control of your IT and telecoms infrastructure. We can create bespoke solutions for your individual and specific needs.

Our highly skilled technicians are available 24/7, 365 days a year to monitor, troubleshoot and repair your network, server and storage system infrastructures leaving you to run your business. We also supervise and escort all your visitors to your colocation space.

We combine practical experience in data centre infrastructure management with IT and telecoms certifications such as CCNA, ITIL and CDCP. We are specialists in dealing with troubleshooting and maintenance of WAN, SDH, DWDM, IP, Metro Ethernet and Fibre related systems. Belcom247's Managed Colocation service is currently available at major data centres in London, Paris, Amsterdam, Frankfurt, Madrid, Copenhagen, Dubai, Singapore, Sydney and Hong Kong.

Next Step

If you are considering moving your network, server or storage systems infrastructure to a data centre, please give us a call today on +44 (0)1483 303303 or email info@belcom247.com
