

We'll measure, monitor and check your network infrastructure so you get real value for money from it.

Belcom247 offers a variety of tools and services to help you be confident and assured that your network infrastructure works efficiently and effectively.

Network Infrastructure Optimisation

This service combines desk and field based audits to give you the information you need to make sure that the network infrastructure you are paying for ultimately gives you the cost base, quality and reliability required to support your critical business processes.

Our optimisation process includes an in-depth audit of your invoices for all telecom and data centre infrastructure related services. As well as cross-referencing invoices with contracts, rates, purchase orders and actual usage, our field technicians can trace circuits and check traffic load on your networks so you don't end up paying for services you don't need. This combination of desk and field-based research is a proven way of ensuring that you get the best value for money from your contracts and that billing errors are eliminated.

Power Management Solutions

Belcom247 design, install and monitor power management systems which enable you to make energy efficiency savings whilst meeting the latest regulations on green data centre operations. We provide both practical energy savings advice which can be implemented immediately and detailed recommendations on power management which typically result in a Return on Investment (ROI) within 12 months.

Carrier Contract Management

We manage your contracts for all telecom and data centre infrastructure services to ensure that your suppliers meet their service level commitments and give value for money. We also, on your behalf, work with your suppliers on performance improvement programmes and provide you with the management dashboard you need to guarantee continuity of your business operations.

Next Step

If you are considering outsourcing any of the services mentioned above, please give us a call today on +44 (0)1483 303303 or email info@belcom247.com
